

NEWS RELEASE

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EST, TUESDAY, NOVEMBER 23, 2010

BEA 10-54

Lisa Mataloni: (202) 606-5304 (GDP) gdpniwd@bea.gov
Andrew Hodge: (202) 606-5564 (Profits) cpniwd@bea.gov
Recorded message: (202) 606-5306

GROSS DOMESTIC PRODUCT: THIRD QUARTER 2010 (SECOND ESTIMATE) CORPORATE PROFITS: THIRD QUARTER 2010 (PRELIMINARY)

Real gross domestic product -- the output of goods and services produced by labor and property located in the United States -- increased at an annual rate of 2.5 percent in the third quarter of 2010, (that is, from the second quarter to the third quarter), according to the "second" estimate released by the Bureau of Economic Analysis. In the second quarter, real GDP increased 1.7 percent.

The GDP estimates released today are based on more complete source data than were available for the advance estimate issued last month. In the advance estimate, the increase in real GDP was 2.0 percent (see "Revisions" on page 3).

The increase in real GDP in the third quarter primarily reflected positive contributions from personal consumption expenditures (PCE), private inventory investment, nonresidential fixed investment, exports, and federal government spending that were partly offset by a negative contribution from residential fixed investment. Imports, which are a subtraction in the calculation of GDP, increased.

The acceleration in real GDP in the third quarter primarily reflected a sharp deceleration in imports and accelerations in private inventory investment and in PCE that were partly offset by a downturn in residential fixed investment and decelerations in nonresidential fixed investment and in exports.

NOTE.--Quarterly estimates are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and are annualized. "Real" estimates are in chained (2005) dollars. Price indexes are chain-type measures.

This news release is available on [BEA's Web site](#) along with the [Technical Note](#) and [Highlights](#) related to this release.

Motor vehicle output added 0.56 percentage point to the third-quarter change in real GDP after subtracting 0.06 percentage point from the second-quarter change. Final sales of computers added 0.27 percentage point to the third-quarter change in real GDP after adding 0.03 percentage point to the second-quarter change.

The price index for gross domestic purchases, which measures prices paid by U.S. residents, increased 0.8 percent in the third quarter, the same increase as in the advance estimate; this index increased 0.1 percent in the second quarter. Excluding food and energy prices, the price index for gross domestic purchases increased 0.6 percent in the third quarter, compared with an increase of 0.8 percent in the second.

Real personal consumption expenditures increased 2.8 percent in the third quarter, compared with an increase of 2.2 percent in the second. Real nonresidential fixed investment increased 10.3 percent, compared with an increase of 17.2 percent. Nonresidential structures decreased 5.7 percent, compared with a decrease of 0.5 percent. Equipment and software increased 16.8 percent, compared with an increase of 24.8 percent. Real residential fixed investment decreased 27.5 percent, in contrast to an increase of 25.7 percent.

Real exports of goods and services increased 6.3 percent in the third quarter, compared with an increase of 9.1 percent in the second. Real imports of goods and services increased 16.8 percent, compared with an increase of 33.5 percent.

Real federal government consumption expenditures and gross investment increased 8.9 percent in the third quarter, compared with an increase of 9.1 percent in the second. National defense increased 8.5 percent, compared with an increase of 7.4 percent. Nondefense increased 9.5 percent, compared with an increase of 12.8 percent. Real state and local government consumption expenditures and gross investment increased 0.8 percent, compared with an increase of 0.6 percent.

The change in real private inventories added 1.30 percentage points to the third-quarter change in real GDP, after adding 0.82 percentage point to the second-quarter change. Private businesses increased inventories \$111.5 billion in the third quarter, following increases of \$68.8 billion in the second quarter and of \$44.1 billion in the first.

Real final sales of domestic product -- GDP less change in private inventories -- increased 1.2 percent in the third quarter, compared with an increase of 0.9 percent in the second.

Gross domestic purchases

Real gross domestic purchases -- purchases by U.S. residents of goods and services wherever produced -- increased 4.2 percent in the third quarter, compared with an increase of 5.1 percent in the second.

Gross national product

Real gross national product -- the goods and services produced by the labor and property supplied by U.S. residents -- increased 2.3 percent in the third quarter, compared with an increase of 1.8 percent in the second. GNP includes, and GDP excludes, net receipts of income from the rest of the world, which decreased \$5.4 billion in the third quarter after increasing \$3.7 billion in the second; in the third quarter, receipts increased \$7.7 billion, and payments increased \$13.1 billion.

Current-dollar GDP

Current-dollar GDP -- the market value of the nation's output of goods and services -- increased 4.8 percent, or \$171.5 billion, in the third quarter to a level of \$14,750.2 billion. In the second quarter, current-dollar GDP increased 3.7 percent, or \$132.3 billion.

Revisions

The "second" estimate of the third-quarter increase in real GDP is 0.5 percentage point, or \$16.7 billion, higher than the advance estimate issued last month, primarily reflecting upward revisions to personal consumption expenditures, to exports, and to state and local government spending that were partly offset by a downward revision to private inventory investment.

	<u>Advance Estimate</u>	<u>Second Estimate</u>
	(Percent change from preceding quarter)	
Real GDP.....	2.0	2.5
Current-dollar GDP.....	4.2	4.8
Gross domestic purchases price index...	0.8	0.8

Corporate Profits

Profits from current production (corporate profits with inventory valuation and capital consumption adjustments) increased \$44.4 billion in the third quarter, compared with an increase of \$47.5 billion in the second quarter. Current-production cash flow (net cash flow with inventory valuation adjustment) -- the internal funds available to corporations for investment -- decreased \$57.8 billion in the third quarter, in contrast to an increase of \$61.1 billion in the second.

Taxes on corporate income increased \$31.8 billion in the third quarter, compared with an increase of \$2.4 billion in the second. Profits after tax with inventory valuation and capital consumption adjustments increased \$12.6 billion in the third quarter, compared with an increase of \$45.2 billion in the second. Dividends increased \$8.2 billion compared with an increase of \$8.1 billion; current-production undistributed profits increased \$4.4 billion, compared with an increase of \$37.1 billion.

Domestic profits of financial corporations increased \$33.3 billion in the third quarter, in contrast to a decrease of \$3.4 billion in the second. Domestic profits of nonfinancial corporations increased \$18.6 billion in the third quarter, compared with an increase of \$48.2 billion in the second. In the third quarter, real gross value added of nonfinancial corporations decreased, and profits per unit of real value added increased. The increase in unit profits reflected a larger increase in unit prices than in the unit labor costs and the unit nonlabor costs corporations incurred.

The rest-of-the-world component of profits decreased \$7.5 billion in the third quarter, in contrast to an increase of \$2.8 billion in the second. This measure is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. The third-quarter decrease was accounted for by a larger increase in payments than in receipts.

Profits before tax increased \$76.3 billion in the third quarter, compared with an increase of \$15.3 billion in the second. The before-tax measure of profits does not reflect, as does profits from current production, the capital consumption and inventory valuation adjustments. These adjustments convert depreciation of fixed assets and inventory withdrawals reported on a tax-return, historical-cost basis to the current-cost measures used in the national income and product accounts. The capital consumption adjustment increased \$1.4 billion in the third quarter (from -\$170.7 billion to -\$169.3 billion), in contrast to a decrease of \$0.8 billion in the second. The inventory valuation adjustment decreased \$33.2 billion (from -\$3.5 billion to -\$36.7 billion), in contrast to an increase of \$32.9 billion.

r Revised

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households. Percentage changes for these series are included in the addenda to table 8 and appendix table A.

See "Explanatory Note" at the end of the tables.

^r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the second quarter of 2010.

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments, current surplus of government enterprises, and wage accruals less disbursements, plus personal income receipts on assets, and personal current transfer receipts.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

^r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the second quarter of 2010.

1. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

4. The deflator for gross value added of nonfinancial corporate business divided by 100.

NOTE. Estimates in this table are based on the 2002 North American Industry Classification System (NAICS).

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the second quarter of 2010.

1. For some components of final sales of computers, includes computer parts.

2. Farm output less intermediate goods and services purchased.

3. Consists of GDP less gross value added of farm, of households and institutions, and of general government.

4. Gross domestic income deflated by the implicit price deflator for gross domestic product. Includes changes due to the incorporation of revised wage and salary estimates for the second quarter of 2010.

5. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

6. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

See "Explanatory Note" at the end of the tables.

Explanatory Note: NIPA Measures of Quantities and Prices

Current-dollar GDP is a measure of the market value of goods, services, and structures produced in the economy in a particular period. Changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year -- at present, the year 2005 -- equal to 100.

Annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent years. (Quarterly changes in quantities and prices are calculated using a Fisher formula that incorporates weights from two adjacent quarters; quarterly indexes are adjusted for consistency to the annual indexes before percent changes are calculated.) For example, the 2007-08 annual percent change in real GDP uses prices for 2007 and 2008 as weights, and the 2007-08 annual percent change in GDP prices uses quantities for 2007 and 2008 as weights. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. Percent changes in Fisher indexes are not affected by the choice of reference year. (BEA also publishes a measure of the price level known as the implicit price deflator (IPD), which is calculated as the ratio of the current-dollar value to the corresponding chained-dollar value, multiplied by 100. The values of the IPD are very close to the values of the corresponding "chain-type" price index.)

Index numbers of quantity and price indexes for GDP and its major components are presented in this release in tables 5 and 6. Percent changes from the preceding period are presented in tables 1, 4, 7, 8, and appendix table A. Contributions by major components to the percent change in real GDP are presented in table 2.

Measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2005) dollar estimates." For most series, these estimates, which are presented in table 3, are computed by multiplying the current-dollar value in 2005 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2005 and if real output for this component increased 10 percent in 2006, then the chained (2005) dollar value of this component in 2006 would be \$110 (= \$100 x 110 / 100). Percent changes calculated from chained-dollar estimates and from chain-type quantity indexes are the same; any differences will be small and due to rounding.

Chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate). This is because the relative prices used as weights for any period other than the reference year differ from those of the reference year. A measure of the extent of such differences is provided by a "residual" line, which indicates the difference between GDP (or other major aggregate) and the sum of the most detailed components in the table. For periods close to the reference year, when there usually has not been much change in the relative prices that are used as weights, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. Thus, the contributions to percent change shown in table 2 provide a better measure of the composition of GDP growth. In particular, for components for which relative prices are changing rapidly, calculation of contributions using chained-dollar estimates may be misleading even just a few years from the reference year.
