RRB Financial Reports

The Railroad Retirement Board (RRB) is required by law to submit annual financial reports to Congress on the financial condition of the railroad retirement system and the railroad unemployment insurance system. These reports must also include recommendations for any financing changes which may be advisable in order to ensure the solvency of the systems. In June, the RRB submitted its 2016 reports on the railroad retirement and railroad unemployment insurance systems.

The following questions and answers summarize the findings of these reports.

1. What were the assets of the railroad retirement and railroad unemployment insurance systems last year?

As of September 30, 2015, total railroad retirement system assets, comprising assets managed by the National Railroad Retirement Investment Trust and the railroad retirement system accounts at the Treasury, equaled \$26.3 billion. The Trust was established by the Railroad Retirement and Survivors' Improvement Act of 2001 to manage and invest railroad retirement assets. The cash balance of the railroad unemployment insurance system was \$108.9 million at the end of fiscal year 2015.

2. What was the conclusion of the 2016 report of the financial condition of the railroad retirement system?

The conclusion was that, barring a sudden, unanticipated, large decrease in railroad employment or substantial investment losses, the railroad retirement system will experience no cash-flow problems during the next 25 years. The long-term stability of the system, however, is still uncertain. Under the current financing structure, actual levels of railroad employment and investment return over the coming years will largely determine whether corrective action is necessary.

3. What methods were used in forecasting the financial condition of the railroad retirement system?

The 2016 report projected the various components of income and outgo of the railroad retirement system under three employment assumptions, intended to provide an optimistic, intermediate and pessimistic outlook, for the 25 calendar years 2016-2040. The projections of these components were combined and the investment income calculated to produce the projected balances in the railroad retirement accounts at the end of each projection year.

(More)

Projecting income and outgo under optimistic, intermediate and pessimistic employment assumptions, the report indicated no cash-flow problems occur throughout the 25-year projection period under any of the three employment assumptions.

4. How do the results of the 2016 report compare with the 2015 report?

The projected tier II tax rates for each calendar year are either the same or higher than in last year's report. (Railroad retirement payroll taxes, like railroad retirement benefits, are calculated on a two-tier basis.) The projected combined account balances are lower at the end of each year.

The unfavorable comparison with last year was due to overall unfavorable economic and employment experience, with the largest impacts resulting from declining employment and actual investment return of approximately 0.2 percent falling below the expected investment return of 7 percent in calendar year 2015.

5. Did the 2016 report of the railroad retirement system recommend any railroad retirement payroll tax rate changes?

The report did not recommend any change in the rate of tax imposed by current law on employers and employees.

6. What were the findings of the 2016 report on the financial condition of the railroad unemployment insurance system?

The RRB's 2016 railroad unemployment insurance financial report was also generally favorable. Even as maximum benefit rates increase 36 percent (from \$72 to \$98) from 2015 to 2026, experience-based contribution rates maintain solvency. No new loans are anticipated even under the pessimistic assumption. Unemployment levels are the single most significant factor affecting the financial status of the railroad unemployment insurance system. However, the system's experience-rating provisions, which adjust contribution rates for changing benefit levels, and its surcharge trigger for maintaining a minimum balance help to ensure financial stability in the advent of adverse economic conditions.

Under experience-rating provisions, each employer's contribution rate is determined by the RRB on the basis of benefit payments made to the railroad's employees. Even under the pessimistic assumption, the report predicted that the average employer contribution rate remains well below the maximum throughout the projection period.

A 1.5 percent surcharge is in effect in calendar year 2016. Under all three employment assumptions, the report projects a surcharge of 1.5 percent in 2017 and 2018, with a surcharge of 1.5 percent predicted for 2019 under the pessimistic assumption and likely under the intermediate and optimistic assumptions.

7. What methods were used to evaluate the financial condition of the railroad unemployment insurance system?

The economic and employment assumptions used in the unemployment insurance report corresponded to those used in the 2016 report of the retirement system. Projections were made for

(More)

various components of income and outgo under each of the three employment assumptions, but for the period 2016-2026, rather than a 25-year period.

8. Did the 2016 report on the railroad unemployment insurance system recommend any financing changes to the system?

No financing changes were recommended at this time by the report.
